SUMMARY

Senior Software Engineer and former CTO with 10+ years of experience designing, modernizing, and scaling .NET-based applications across education, SaaS, and enterprise environments.

Deep expertise in C#, ASP.NET Core, AWS, React, and cloud-native architecture, with a strong track record of leading legacy modernization, improving application performance, and delivering secure, scalable systems.

Founded and built products from the ground up, led teams of up to 8 engineers, and partnered cross-functionally to drive architectural decisions, technical documentation, and complex migrations.

WORK EXPERIENCE

Tech9 - The Church of Jesus Christ of Latter-Day Saints, West Jordan, UT

05/2022 – Present

Senior Software Engineer

- Cut request latency on map requests from 3s to 200ms by initiating and leading a full system rewrite; produced a 40-page architectural risk report exposing database scalability limits and influenced PM/PO to approve application redesign.
- Migrated an ASP.NET Core customer facing global application to NextJS, while maintaining localization support for 18 languages and Google Maps interactivity, using tools like zustand, zod, react-intl and OData queries to connect to MS Dynamics 365 CRM.
- Designed an ETL cloud based solution for an organizational data migration, using services such as Azure Functions and Azure Service Bus to move historical university student data into Anthology SIS for BYU Pathways.
- Increased student load-time by 50% using stored procedures in a place where Entity Framework produced slow queries.
- Reduced level of technical debt by migrating an ASP.NET Core 2.2 application to .NET 8 while refactoring to a clean architecture.
- Integrated with internal department GraphQL APIs, allowing communication between different departments and applications inside the church's corporate structure.

Tridius Technologies, El Plano, TX

10/2021 – 05/2022

Principal Software Engineer

- Consulted the client's engineering manager for the rewrite of the application, gathering requirements as needed to meet with a strict deadline.
- Led a team of 3 developers in rewriting a marketing dig lead platform called Lead Dog. The original application was a .NET Framework Webforms app, and it was rewritten to use .NET 6 and ASP.NET Core, using a low-JS approach with AlpineJS, HTMX and TailwindCSS for the UI.
- Trained 2 junior developers while successfully hitting the 5 month deadline for the application's rewrite. By mentoring them, due to the increase in their technical ability, 1 of them was promoted not long after.
- Documented everything about Lead Dog in order to allow an easy transition into maintenance.
- Implemented HangFire to manage long-running jobs without blocking the UI, which resulted in a better user experience and the elimination of a 5 second wait time when triggering long running jobs.
- Migrated the existing database from SQL Server to Postgres.
- Migrated the application by moving from on-prem to using Docker, AWS App Runner and a Postgres AWS RDS instance, thus turning the application completely cloud native.

Front End Software Consultant

- Replaced 150 legacy pages with a configurable React and TypeScript solution that allowed the display of financial charts and market information of financial assets and commodities. This solution used Ag Grid for creating configurable and highly customizable grids for financial data.
- Created several iterative prototypes for this solution to allow for extensive testing before deployment due to its high impact across the entire application.
- Reduced development time for subsequent pages with financial charts and grids by 50% while refreshing the UI with a more modern look.
- Increased page load performance for every legacy page migrated by 60% when compared to the previous configuration based system for said asset pages.

EduTech de Centroamérica, San José, Costa Rica

01/2019 – 12/2020

Co-founder CTO - TrainMe Education

- Developed the first POC for Trainme.education, a white-label Learning Management System (LMS) as a B2B SaaS application. The application was built using Laravel, PHP, React and PostgreSQL.
- Worked closely with EduTech's CEO to evolve and understand the product's vision, not just as a technical leader but functioning as product manager, defining technical requirements and prioritizing feature development based on feature requests.
- Led growth from MVP stage into product market fit and sustained sales.
- Established AWS infrastructure from a fresh account into hosting multiple cloud native systems using services such as: AWS EC2, AWS S3, AWS Elastic Load Balancer, AWS RDS, AWS ElastiCache, AWS Amplify, AWS Cognito.
- Reduced cloud costs by 30% by eliminating redundant servers and implementing horizontal scaling with AWS ELB.

Staff Software Engineer - Census application for the Ministry of Public Education in Costa Rica

- Led technical pre-sales engagement, defining secure architecture controls (SQL injection, XSS and CSRF mitigation) and delivering end-to-end system specification that secured a \$200K contract.
- Directed a 5-person engineering team to build and deploy a cloud-hosted (AWS) ASP.NET Core 6 + React/TypeScript platform that digitised national student census data, cutting processing time from 8 months to 1 month.
- Stabilised high-traffic AWS-hosted census platform by reducing critical query latency from 30s to 2s and leading emergency DDoS mitigation, ensuring uninterrupted national data collection within strict submission deadlines.

Senior Software Engineer, Intel, Heredia, Costa Rica

2017 – 2019

Software Developer, First Factory, Heredia, Costa Rica

2015 – 2017

EDUCATION**Universidad de Costa Rica**

2011-2013

Associates Degree – Computer Science

SKILLS

Tools and Software: C#, ASP.NET Core, SQL Server, Postgres, React, Typescript, Entity Framework, Dapper, Blazor, Laravel, PHP, AWS EC2, AWS RDS, AWS SQS, AWS SNS, AWS S3, AWS Cognito, AWS App Runner, AWS RDS, Azure Queue Service, Azure Functions, Azure Blob Storage, System Architecture, Typescript, AstroJS, AlpineJS, HTMX, NextJS, TailwindCSS, Git, Docker, CI/CD.
